

Heritage Agent Portal — a homeowners quote-to-issue journey, worked out in sixty-one wireframes.

A web portal for Heritage Insurance agents, built on Majesco's cloud P&C platform: a dashboard for policies, quotes and claims, and a guided homeowners quote that runs from agent details to an issued policy. I designed it at Majesco. This case study shows the lo-fidelity click-through where the structure was decided; the final UI was delivered to the client and isn't shown here.

Summary

Mission

An insurance agent's day is a queue: quotes to finish, renewals coming up, a claim someone phoned in, tasks from underwriting. Heritage Insurance — a Florida homeowners carrier running on Majesco Policy —

Client

Heritage Insurance — designed at Majesco as part of a Majesco Policy implementation for the carrier's agent channel.

needed an agent portal that put all of that on one page and made the hardest job, a homeowners (HO-3) quote with its coverages, underwriting questions and property details, feel like a guided form rather than a system of record. It had to work for a new agent on their first day and a veteran with 200 policies in their book.

My contributions

I owned the UX end to end, and this page is about the part that mattered most: the lo-fidelity click-through. Sixty-one wireframe screens cover sign-in, the dashboard, a seven-step quote, the coverage-comparison dialog, underwriting, additional property, policy info, summary, billing and issuance. Product owners, business analysts and the carrier's SMEs walked it screen by screen; that's where fields were cut, sections merged, and the step count came down before any visual design was applied. The hi-fidelity UI that followed used the same structure.

Impact

The wireframes became the agreed specification for the Heritage implementation on Majesco Policy: the seven-step journey was compressed to five for build, the "context bar above, summary rail beside" pattern was reused across other carrier portals on the platform, and the coverage-comparison dialog became a standard component.

What I did

- Lo-fi click-through (61 screens)
- Agent dashboard & task management
- Quote journey structure & step model
- Plan selection & coverage comparison
- Underwriting & property questionnaires
- Summary, billing & issuance
- Walkthroughs with PO, BAs and SMEs

My role

Product Designer at Majesco — lead designer on the portal, working with the product owner, business analysts and the implementation engineering team.

Timeline

2019

Sign in, then a dashboard that reads like a to-do list.

Sign-in keeps the support number in view for a nervous first-timer and offers "Become an agent?" for everyone else. The dashboard is counters first — Policies, Book of Business, Claims — then the two things an agent starts most: a quote ("get policy coverage premium in three steps": ZIP, product, agent) and a claim (enter your policy number, Start Claim). Task management sits alongside so nothing from underwriting gets missed.

Sign in — username, password, remember me, and the "need to speak to our representative?" card.

Dashboard — Policies / Book of Business / Claims counters, File a Claim, Start Quote in three steps, task management.

DECISION

Counts, then action

Every block leads with a big number — 218 quotes, 18 open claims — because that's how an agent thinks about their day. The action that follows (start a quote, start a claim) is right under the number it relates to.

DECISION

Start a quote from the dashboard

ZIP, product and agent — three fields — and the quote begins before the agent has left the home page. The full form only appears once there's something to fill.

The quote: seven steps in the wireframes, five in the build.

The click-through modelled the full journey — Quote Info → Property Info → Coverage Plan → Underwriting Questions → Additional Property → Policy Info → Summary — with a progress line under the step tabs and a rail on the right that keeps the product, insured name, property address and replacement-cost estimate in view. Walking it with agents showed that Property and Additional Property were one thing, and Policy Info belonged inside Quote Info, so five steps went to build.

1 • Quote Info — policy and insured details on the left, the Home Owners / HO-3 summary rail on the right.

Property Address and Construction Details — address, ZIP, city and state, with a Discard Quote escape in the rail.

3 • Coverage Plan — Basic vs Pillar plan, the mandatory coverages table with limits and premium, replacement-cost estimate and valuation date.

Compare Coverages — Basic plan and a customised plan side by side, editable limits, and Calculate Premium before Save & Continue.

DECISION

The quote context never leaves the screen

Product, insured, address and the replacement-cost estimate sit in a rail on every step. An agent interrupted by a phone call can look up and know exactly where they are and for whom.

DECISION

Comparison is a dialog, not a step

Most agents pick Basic or Pillar and move on. Customising limits is the exception, so it lives in a Compare Coverages dialog with its own Calculate Premium — off the main path but one click away.

Underwriting and property: questions, not fields.

Underwriting is dozens of yes / no questions about occupancy and the property. The wireframes group them under headings, phrase each as a full question, and answer them with a toggle. The banner in the rail says the one thing an agent needs to hear at this point: you can continue — the underwriter will approve the final application.

4 • Underwriting Questions — Occupancy and Property Type & Characteristics, one toggle per question.

The screenshot shows the '4. Underwriting Questions' section of the Heritage Insurance portal. It features a table of questions related to occupancy and property characteristics. Each question has a 'YES' or 'NO' toggle button. A red banner at the top right indicates a replacement cost estimate. The table includes questions about business conducted on premises, home day care exposure, incidental occupancy, dwelling for sale, vacancy, porches/decks, swimming pools, construction materials, roof section, and risk ownership.

Question	Answer
Any Business Conducted on Premises including (but not limited to): Farm, Ranch, Orchard, or Grove?	NO
Any home day care exposure on premises?	YES
Is the home used for any purpose other than residential occupancy or is there any incidental occupancy other than what is allowed under the Permitted Incidental Occupancy endorsement?	NO
Is the Dwelling for Sale?	YES
Will the property be vacant or unoccupied for more than 30 days?	NO
Property Type And Characteristics	
Are there any porches or decks more than 2 feet off the ground or with 3 or more steps that are not protected with properly installed handrails?	YES
Does the dwelling have any existing or unrepaired damage?	YES
Is the construction of the dwelling unconventional (e.g. Log, EPS, or Synthetic Stucco)?	YES
Does a flat roof section comprise more than 20% of the roof surface over living space, or is there a flat roof section over 10 years old?	YES
Is the risk owned by a Trust, LLC, Corporation or other entity?	YES

DECISION

Toggles for yes / no, buttons only for three-way

A toggle reads at a glance and works on a tablet. Where a question has three answers — renovation status Yes / Partial / Full — it becomes a segmented button instead, never a dropdown.

DECISION

Reassure before the underwriter does

"You can continue with the quote process. Your underwriter will need to approve the final application." One sentence in the rail stopped agents from abandoning quotes they thought had been rejected.

Billing and issuance.

Billing is the annual premium, who to bill, and a payment plan chosen from four options — Full Pay, Semiannual, Quarterly, 11-Pay EFT — with the instalment schedule drawn out by date and amount as soon as one is picked. Submit for Issuance ends with a policy number, the policy document, premium and dates, and a single Done.

Billing Info — annual premium, bill-to entity, four payment plans, the instalment schedule, method of payment.

What I'd carry into the next insurance product.

Wireframe the whole journey, not the happy screens.

Sixty-one greyscale pages felt excessive until they were the reason seven steps became five.

Put the exception in a dialog.

Customising coverages matters to a few agents; the rest should never see the table.

Keep the context rail; change only the middle.

On a long form, stability is what makes it feel short.

Say the reassuring thing early.

A single sentence about underwriter approval did more for completion than any layout change.
